DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, drawn to an asset tracking system ensuring accurate geocoding of one or more locations comprising a method of determining if characteristics identify a same location, classified in class 705, subclass 22.
 - II. Claims 19-27, drawn an asset tracking system comprising at least one mobile device coupled in communication to one of the communication networks wherein the mobile device receives the location information for the asset, classified in class 701, subclass 213.
 - III. Claims 28-44, drawn to a method of ensuring accurate geocoding of one or more locations comprising setting a level of confidence threshold, classified in class 701, subclass 225.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are each related to Invention II as process and apparatus for its practice. The inventions are distinct if it can be shown that *either*: (1) the process as claimed can be practiced by another, materially different apparatus, or by hand, or (2) the apparatus as claimed can be used to practice another, materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice

another, materially different process, such as coupling a mobile in communication to one of the communication networks wherein the mobile device receives the location information for the asset.

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In this case, Invention I has separate utility from Invention III, determining if characteristics identify a same location and allowing a geocode of the same location to be sent to one or more assets; and, Invention III has separate utility from Invention I, such as setting a level of confidence threshold and determining if the characteristic generates a level of confidence in a geocode that identifies the location above the threshold. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement, to be complete, *must* include an election of the invention to be examined, even if the requirement be traversed (37 CFR 1.143).
